Control output diagram

- ※If the control output terminal is short-circuited or overcurrent condition is existed, the control output will turn off due to protection circuit.
- ※Please supply the power to Brown and Blue wire of emitter and Synchronous wire(White) of the receiver must be connected with that of the emitter.

Operation mode

Connections

- ※The power of the emitter and the receiver must be supplied from same power line.
- ※Synchronous wire(White) of the receiver must be connected with that of the emitter.

■ Mounting and sensitivity adjustment

1. Supply the power to the sensor, after install the emitter and the receiver facing each other.
2. Set the receiver in the middle of position where indicator turns on adjusting the receiver to the right and the left or up and down.
3. Fix both units tightly after checking that the unit detect the target.

- ※If the sensing target is translucent body or smaller than $\phi 5\text{mm}$, it might not be detected because the target allows too much light to pass.
